

DIRECT ACTING PRESSURE RELIEF VALVES WITH ONE-WAY CHECK VALVE

1

The valve has a combined function in a single cartridge. It consists of a direct acting maximum pressure valve and a unidirectional check valve. The relief valve raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. It has a pack spring with a mechanical stop.

The spring in the check valve enables the cartridge to be mounted in any position.

It has a galvanised steel body. The tapered poppet of the relief valve and the guided ball poppet are made from tempered and ground steel.
